

# DIY Holograms

Turn your cell phone into a  
hologram projector!

[Bit.ly/TSOHologram](http://Bit.ly/TSOHologram)

1. Carefully trace the template onto a piece of plastic ( a report cover or transparency film will work).
2. Cut along the solid lines
3. Carefully fold along the dotted lines and tape it together to form an upside down pyramid.

\* Pro tip: Turn the brightness all the way up on your phone. It works best in a darkened room.
